#	Element	Relevant	Successes	Failures	Score
48	A tablist without role="tablist" is not announced as a group of related tabs, which prevents screen reader users from recognizing the structure and purpose of the component. This makes it harder to navigate between tabs and understand that the controls belong to a single set.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
49	Applying role="tablist" to an element without tabs misleads screen reader users by suggesting a group of tabs that does not exist.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
50	Custom tabs must be explicitly defined for screen readers since there are no native HTML tab elements. Without assigning role="tab" to the interactive elements, assistive technology will not identify them as tabs, preventing users from understanding their function or navigating them as part of a tab interface.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
51	Applying role="tab" to an element that is not part of a functioning tab interface misleads screen reader users by presenting it as a tab without a corresponding panel.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
52	The role="tabpanel" identifies an element as the content region of a tab interface. Without this role, panels are exposed only by their native role (such as a generic div or a named section) and screen reader users may not perceive them as part of the tab structure.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
53	Applying role="tabpanel" to an element without a corresponding tab misleads screen reader users by announcing it as tab content, even though no controlling tab exists.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
54	If a column header is not marked up with the correct role or scope, screen reader users cannot determine which header applies to each cell.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
55	If a table header cell is empty, screen reader users may only hear a generic label such as "column 3" or nothing at all. This makes it harder to understand what each column or row represents.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
56	When a layout table is marked up with HTML elements like <table> or <tr>, or assigned table ARIA roles, screen readers announce a data table structure with rows, columns, and headers, even though the table is only used for page layout.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
57	Nested tables are often misinterpreted by screen readers, making it hard for users to follow the intended structure and meaning of the data.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
58	If a table row header is not marked up with the correct role or scope, screen reader users cannot determine which header applies to each cell.	No	0	0	

WCAG Best Practices (Not included in score)

#	Element	Relevant	Successes	Failures	Score
1	If an element's aria-describedby attribute points to an id that does not exist or is not valid, assistive technologies will not convey the intended description, causing users to miss important context.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
2	Since aria-labelledby relies on valid id references, screen readers can only announce the label if the target exists. If the id is missing or invalid, the label will not be conveyed, causing users to miss important context.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
3	Figure elements are often incorrectly used to display images on the screen. Incorrectly using the figure tag, without providing a proper figcaption, adds unnecessary clutter to the screen reader user's experience.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
4	The title attribute is announced inconsistently across screen readers and browsers, making it unreliable for labeling interactive controls. Because many users may never hear the content, reliance on the attribute risks loss of information. Instead, it should be used to provide extra help text in addition to a valid label.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
5	The element's aria-controls points to an id that does not exist, or is not valid, breaking the link between the controlling element and the content it manages.	No	0	0	

#	Element	Relevant	Successes	Failures	Score
6	It's good practice to warn users about the expected behavior when activating a link triggers an image to appear.	No	0	0
